(b)
target $1 - \delta_f = 0.95$
10^{-4}
10^{-3}
10^{-2}
depolarising strength p (Choi-state floor $\tilde{\lambda} = p/4$)
Tomography + diamond-norm ball; slope −2.00 [−2.00, −2.00]
Direct Pauli-error estimation; slope −1.00 [−1.05, −0.96]
Hockey-stick E_1, diamond-norm ball; slope 0.00 [0.00, 0.00]
Uhlmann F_U, diamond-norm ball; slope −0.01 [−0.02, 0.00]
Intrinsic lower bound $c_0/(\eta^2\tilde{\lambda})$
