(a) window where $\hat{F}$ drops to 0.9
local, Z $(w=1)$
local, $Z\otimes Z$ $(w=2)$
local, $Z^{\otimes 3}$ $(w=3)$
local, $Z\otimes \mathbb{1}$ $(n=2,\ w=1)$
global, $n=2$
global, $n=3$
window $\delta_{0.1}$ (rad)
depolarizing probability p
(b) collapse of the exact curves
$\hat{F}(\mathcal{N}_{p,\delta}, \mathcal{N}_p)$
$n=w=1$
$n=w=2$
$n=w=3$
$p=10^{-2}$
$p=10^{-3}$
$p=10^{-4}$
$(1+u^2)^{-1/2}$
$u=\delta\sqrt{\kappa_n}/4$
