10^{-4}
10^{-3}
10^{-2}
depolarizing probability p (Choi-state floor $\tilde{\lambda} = p/4$)
diamond-norm ball and Theorem 2; slope -2.00
Pauli error rates in the known frame; slope -1.00
hockey-stick E_1, same ball ($\delta = 1$); slope 0.00
Uhlmann F_{U}, same ball ($\delta = 1$); slope -0.01
reference scale $c_0/(\eta^2 \tilde{\lambda})$
